

SMART SECURITY 2010

May 24-25, 2010
NRECA Conference Center, Arlington, VA

Towards Seamless Interoperability and Trust The Intersection between Homeland Security and Homeland Defense

Eight and one half years since the tragic terrorist attack on the World Trade Center 9/11/2001 and one year into the Obama administration, U.S. National and Local Government Departments, Agencies and Industry Partners have made significant progress but are still grappling with substantive security concerns.

We, in the United States, have become more successful in sharing and protecting sensitive information than we were, but much more needs to be done. Have other countries achieved any success sharing sensitive information among their security organizations?

- What lessons learned can the U.S. share with other countries?
- What lessons learned can other countries share with the U.S.?
- How can we all protect our respective airports, ports, harbors and critical infrastructure?
- How can we do so and still permit efficient commercial and social activity to flourish?
- How can we optimize our resiliency and security?

This conference will identify issues concerning the nexus of Homeland Security and Homeland Defense with particular emphasis on how we might achieve greater integration and interoperability, and what funded programs are in place.

This Conference will offer a unique opportunity to hear experts discussing current security challenges and solutions, and to network with solution providers and officials.
